(a) foresight is a floor; deployable headroom varies
controlled (known p)
real covariates, simulated outcomes (known p)
real labels, engineered stream ($\hat{p}$)
real labels, natural stream ($\hat{p}$)
foresight = deployable
Foresight (EVPI) ($\times 10^{-3}$)
10^1
10^0
10^0
10^1
Deployable headroom H_{pre} ($\times 10^{-3}$ Brier)
(b) shares do not depend on family size
controlled
real covariates, broad history
real covariates, gap history
Deployable share $H_{\text{pre}}/H_{\text{post}}$
